

JUNCTION ASIA 2026

# Upstage Track Challenge

# About Upstage

# Upstage, a Global AI Startup: Korea, US, and Japan

## Mission

### Making AI Beneficial

Making the world better with AI.

## Vision

### Building Intelligence for the Future of Work

Transforming how work gets done, helping companies grow efficiently

## \$270M

Total funding raised (AWS · AMD)

## 100+

AI engineers / global customers

## Portal 'Daum' acquired

Backed by global top-tier investors AWS & AMD · #2 Document AI worldwide on AWS

Marketplace · Named to the CB Insights AI 100

## Korea's first generative AI unicorn

# Upstage selected by the Ministry of Science and ICT to lead Korea's 'Sovereign AI Foundation Model' project

SOGANG UNIVERSITY

# Leading the AI market with explosive growth

More than 100 engineers deliver our education and services, **with 800+ AI models** built to date.

# Upstage powers the Future of Work with AI

## Models

**Solar LLM**

A family of small yet powerful LLMs

**Document Parse**

Make your documents LLM-ready

**Information Extract**

Universal information extraction

## Platforms

**upstage Studio**

Build AI Document Workflow with Agents

**AI Workspace** for Enterprise

Enterprise-ready Generative AI Platform  
for Secure & Governed AI Operations

**TimelyAI**

Until everyone uses AI in their work

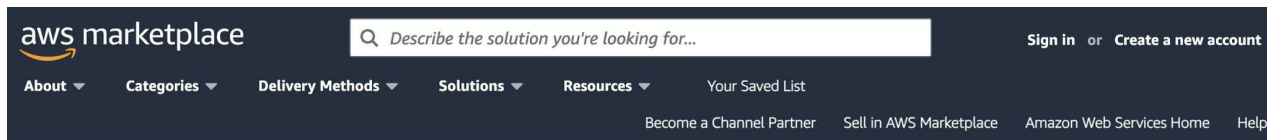

## Education

**upstage Education**

Until everyone becomes an AI innovator

# Top-ranked on AWS Marketplace

Upstage's Document AI is the #2 most popular solution worldwide on AWS Marketplace.

## The most subscribed products last month

and top tier investors

Products

# Upstage Studio

Tackle document chaos with intelligence

# What is Upstage Studio?

Upstage Studio lets you build **document automation agents** with high accuracy in minutes — no code required.

## *upstage* Studio

### Document Classify

Automatically sort and route documents by type

### Document Parse

Convert PDFs, scans, and emails into machine-readable text

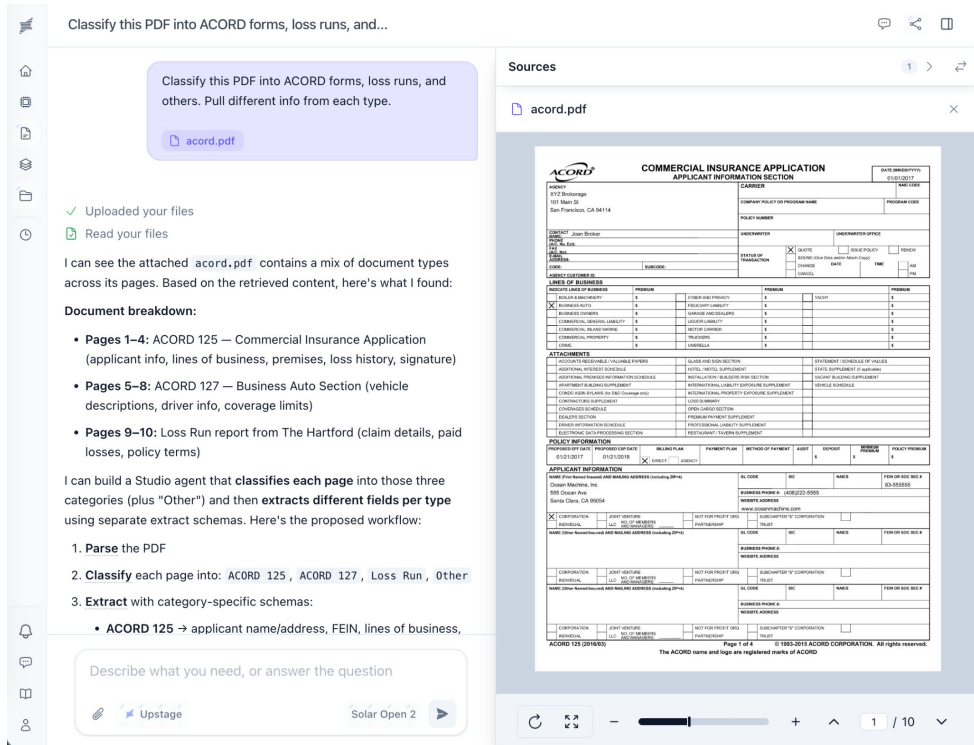

### Information Extract

Extract precise key-value data from any document — instantly

### Solar LLM

Reason, summarize, and generate answers based on complete document context

## Search / RAG

# Document Chat

# Document Translation

# Key features: Automate

Construct custom agents for any use case with high-performance nodes.

## *upstage* Studio

### Parse

Convert any document to text

### Classify

Categorize and split complex files

### Extract

Extract structured data with precision

### Validate

Validate accuracy of extraction results

### Instruct

Synthesize insights and automate workflows

# Key feature #1: Parse

**Parse** converts diverse document formats to HTML and markdown.

## 1 Intelligent recognition

Extracts text, tables, and charts including multi-page structures

## 2 Source traceability

Full transparency with layout analysis and coordinates

### Basic Mathematical Concepts

#### Introduction

This document provides an overview of fundamental mathematical concepts including arithmetic, algebra, geometry, and calculus. These concepts form the basis of higher-level mathematics and are essential for various applications in science, engineering, and everyday life.

Tables 1 : Basic Arithmetic Operations

| Operation      | Symbol | Example | Result |
|----------------|--------|---------|--------|
| Addition       | +      | 5 + 3   | 8      |
| Subtraction    | -      | 9 - 4   | 5      |
| Multiplication | *      | 6 * 7   | 42     |
| Division       | /      | 20 / 4  | 5      |

#### Equation 1: Quadratic Formula

The quadratic formula is used to solve quadratic equations of the form  $ax^2 + bx + c = 0$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

\*Measured on **dp-bench**, public dataset on HuggingFace. Last updated Jun 2026.

\*All prices are based on each vendor's publicly listed price (list price), calculated at the lowest volume tier (the most expensive usage band). Actual rates may be lower at scale due to volume discounts or negotiated pricing.

# Key feature #2: Classify

**Classify** lets you to define your own document classes without additional training.

## 1 Downstream integration

Trigger tasks based on classifications

## 2 Auto-splitting

Separate files with bundled documents into sub-documents

# Key feature #2: Classify

**Classify** shows highest speed and accuracy among peers.

\* Excludes documents where any model encountered an error. Updated June 2026.

# Key feature #4: Instruct

**Instruct** receives simple natural language prompts to generate highly tailored insights.

## Prompt

Review the parsed invoice content. Determine which of the three categories below applies.

If ANY line item matches, return this output verbatim with the bracketed sections filled in:

## Status: Rejected — Unallowable Items  
...

## es Group INVOICE

MPANY

Decision

Unallowable Items

### Status: Rejected — Unallowable Items

This invoice contains line items that violate AP policy and cannot be processed. Please return to vendor for a corrected invoice. [1]

#### Flagged line items:

- Holiday party catering (deposit) — violates: Holiday party catering [2]
- Bulk gift card purchase - vendor appreciation — violates: Gift cards [3]

**Next step:** Return to vendor; do not extract or post to JDE. [4]

## 1 Insight-driven routing

Trigger downstream actions based on the synthesized results

## 2 Source-grounded insights

Trace every result directly back to the original document

# Studio Product Guide

<https://console.upstage.ai/ko/docs/studio>

Challenge Overview

# Upstage Track Challenge

# Upstage Track Challenge

- **Track Title: Building a Document Agent Service with Upstage Studio**
- **Background :** Paperwork is everywhere — scholarship applications, housing lease contracts, part-time employment contracts, club expense receipts. LLMs handle text well, but real documents are messy — tables, stamps, handwriting, scans — so services that truly understand a document and get the work done are still rare.
- **Challenge Statement :** Spot one repetitive task, recurring mistake, or everyday hassle caused by documents around you, and build a Document Agent service that goes beyond “understanding” documents to actually “getting the work done.” Any domain is welcome — problems students genuinely relate to are especially encouraged.
- **Use of Technology :** Combine Studio agents — Parse (structuring) · Classify (classification) · Extract (field extraction) · Instruct (summarization · translation · Q&A) — and integrate with any service via REST APIs & webhooks. \*Upstage Studio must power the core document-processing stages.
- **Deliverables:** A working document-workflow automation service built on Upstage Studio agents.

# Upstage Track Challenge

- Evaluation Criteria

| Criteria                                      | Evaluation Factor                                                                                                                                                        |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Upstage Technology Implementation (30)</b> | How deeply the team leveraged Upstage Studio and its APIs — agent composition, external integrations, and the difficulty and accuracy of the implementation.             |
| <b>Service Completeness (20)</b>              | Does the demo run reliably end to end?<br>Are the screens, flows, and UX polished enough to be called a real service?                                                    |
| <b>Idea Creativity (25)</b>                   | Is the problem discovery fresh?<br>Does the solution stand apart from existing services?                                                                                 |
| <b>Product Planning (25)</b>                  | Concrete target users and problem definition, well-prioritized scope within the 3-day constraint, and a screen & data-flow design solid enough to become a real service. |

# Upstage Track Challenge

- **Prizes & Benefits**
  - **Benefits:**
    - Goodie package
    - **\$50 in credits** per participant
    - **\$200 in credits** per winning team member

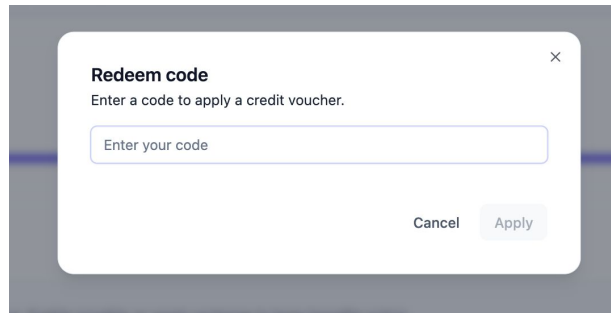

# How to Use Upstage API & Studio

1/ Sign up for the Upstage Console: <https://console.upstage.ai/home>

2/ Enter a redeem code: The redeem code and instructions are available on the Upstage Discord channel. (Console - Dashboard - Credit - Redeem Code )

- **Redeem Code : Edu\_Junction\_2026**

3/ Join the Upstage Studio : <https://studio.upstage.ai/>

A screenshot of a 'Redeem code' dialog box. The dialog has a title bar with a close button (X). The main text says 'Redeem code' followed by 'Enter a code to apply a credit voucher.' Below this is a text input field with the placeholder text 'Enter your code'. At the bottom right, there are two buttons: 'Cancel' and 'Apply'.
